

PLS / I.D. Seam Welders

- TIG
- PLASMA
- LASER
- MIG
- SUB ARC

All Weldlogic seam welders use “chill-shunt” tooling to absorb and dissipate heat through the use of additional mass operating under controlled pressure against the work piece in the weld area.

The Longitudinal seam welder clamps the materials firmly in a butt configuration in alignment giving very uniform chill to the weld.

PLS / I.D. Seam Welders

- COMPLETE PRODUCT OFFERING
- RELIABLE, SIMPLE TO OPERATE
- ALL WELDABLE MATERIALS
- MANY CUSTOM OPTIONS
- NO PART SIZE LIMITATION
- FOR ALL ARC WELDING PROCESSES

Highly consistent “fully penetrated” welds are easily achieved with this method of seam welding. Expect a weld free of melt-through, blow holes, extreme shrinkage or distortion.

Weldlogic seam welder includes high accuracy controls and many other features included to enable high production and high quality results.

Weldlogic manufactures a standard range of seam welders for part lengths up to 180” (15 ft.)
Thickness Ranges: .003” - .500” - **Contact us for a quotation.**
