ACTION** 

Engineering Challenge

CHALLENGE ▼

To improve weld quality, eliminate an operator steering the weld head from start to finish and free the operator up to perform other productive tasks during the welding process.

SOLUTION ▼

- Weldlogic Engineering integrated a Dynamic Laser seam Tracker to enable the operator to load a tube quickly and press start and know the seam weld is made perfectly down the seam center on every tube.
- The 2-D tracker maintains a +/- .001" from seam center
